Redundancia de primer salto: VRRP

Curso 2024-2025

Escuela Superior de Ingeniería y Tecnología

La puerta de enlace de los ordenadores está configurada como 192.168.1.1.

¿Qué ocurre cuando falla R1?

La solución es el protocolo VRRP.

[admin@R1] > interface vrrp add interface=ether1 vrid=51 [admin@R1] > ip address add address=192.168.1.1/24 interface=vrrp1

[admin@R2] > interface vrrp add interface=ether1 vrid=51 [admin@R2] > ip address add address=192.168.1.1/24 interface=vrrp1

[admin@R1 > interface vrrp set vrrp1 priority=150
